Introduction:

SpotShot is an innovative blockchain project that aims to bring a new level of engagement and reward to the world of mobile gaming. With a focus on social and gaming experiences, SpotShot leverages the power of blockchain technology to provide players with real-world rewards for their gaming achievements.

Refer to Earn: SpotShot's Refer to Earn program is a unique feature that allows players to earn rewards by referring their friends to the app. This creates a powerful incentive for players to share the app with others, and helps to drive adoption of the platform.

SpotShot utilizes blockchain technology to provide a secure, transparent and decentralized platform for

Blockchain Technology:

gaming and rewards. This allows for an immutable record of gaming achievements, which can be redeemed for real-world rewards. The use of blockchain technology also ensures that all rewards are transferable and can be traded or sold on cryptocurrency exchanges. SocialFi:

SpotShot's social features, known as SocialFi, allow players to connect with each other, share their

gaming experiences and compete with one another. SocialFi allows players to create and join groups, participate in challenges, and engage in friendly competition. GameFi:

GameFi is a new gaming platform that allows developers to build and distribute games on the SpotShot platform. GameFi provides developers with the tools they need to create and monetize their games, and

provides players with a wide variety of engaging and rewarding gaming experiences. Tokenomics: SpotShot tokenomics consists of a fixed supply minted token called \$Shot. \$Shot is initially minted at 1 billion tokens. Tokens are initially distributed to key stakeholders and the SpotShot exchange.

Businessses can purchase tokens from the exchange to provide as rewards to their customers. Customers acting as content creators create posts which act as referral codes. Other customers can bring the posts to businesses to redeem these rewards. When redeeming the rewards, the content creator and the redeemer are awarded a portion of the post reward. Content creators may stake their \$SHOT monthly to earn minted NFTs. These NFTs represent their tier of content creator. Airdrops:

Airdrops will occur to bootstrap the project, spread awareness and increase ownership of cryptocurrency among potential users and businesses for joining the project and refer friends. Generally promoted on the company's website, Twitter and discord

in a secure, centralized platform. By leveraging blockchain technology and providing real-world rewards for gaming achievements, SpotShot has the potential to become the go-to platform for mobile gaming and

Conclusion:

social engagement.
